

# Handy

Friday, February 21, 2025

7:52 AM

```
select
  r.session_id,
  s.login_name,
  c.client_net_address,
  s.host_name,
  s.program_name,
  st.text, s.status
from sys.dm_exec_requests r
inner join sys.dm_exec_sessions s
on r.session_id = s.session_id
left join sys.dm_exec_connections c
on r.session_id = c.session_id
outer apply sys.dm_exec_sql_text(r.sql_handle) st
where client_net_address is not null and text is not null and s.status = 'running'
```

^^ see if powerbi query is running in sql ^^

#### NEW ORDER FOR LYUBENA

R74 - Order Management Dashboard - to publish the first phase, open orders to Hosier as UAT audience of Lyubena

R82 - Open Production Orders W. Consignment - needs meeting with JP

R45 - Inventory Reconciliation/Transactions Report - need file from ITS, dependency of Missing 945's which will be included in the Order Management Dashboard

32878 - New Report Trade Agreement Price Per Customer

Do not try to add API on the WEB API section.

0

Select the BASIC authentication method and there you have to give the username and password.

here, the username is the account username where you created the API key. And Password is your API key.

For me, this worked.
